

## Park Visor Pro Kids and Park Visor Pro

This visor is designed to protect your eyes from snow, sun, wind and cold temperatures whilst enjoying skiing and snowboarding.

The visor is designed for daytime use only, it is therefore not safe to use at night. The helmet can be used with the visor in the upright position but we suggest stopping before lowering the visor.

The visor complies with current EN 174:2001 standards of safety and performance, offering improved visibility and protection against UV rays.

### **Cleaning:**

After use, clean the visor using a soft cloth to gently wipe off any debris. When the visor is clean, store the helmet in its protective bag and store upright, with no contact to other abrasive surfaces.

When cleaning the visor, never use petroleum based solvents, or cleaners containing abrasive material. To clean the visor, apply a common PH-neutral detergent diluted in water and wipe off gently with a soft cloth. Use a lint-free soft cloth to dry and polish.
